

Dear Laboratory Users,

I am pleased to inform you that Medical Diagnosis will be extending the current accreditation scope and introducing new / twin immunology, biochemistry and haematology platforms.

The new / twin platforms will be used as standard.

This revision will improve provided pathology services and will reduce turnaround times.

Please note:

Reference ranges remain unchanged.

Specimen requirements remain unchanged.

New platforms comply with the internationally recognised standard ISO 15189 for Medical Laboratories – requirements for quality and competence, as well as Internal and External Quality Assessment Scheme requirements and will be assessed by The United Kingdom Accreditation Service (UKAS) during their sixth re-assessment visit on 11th June 2019. New platforms are not under the accreditation scope.

Do not hesitate to contact us if you would like to discuss this change or any other aspect of Medical Diagnosis service.
